1. Introduction

What is the most exciting thing when it comes to travel? Of course, the lovely and wonderful destinations across the globe. Here we are going to explore more about Sri Lanka's tourist places. The beauty of these amazing destinations and their presentation inappropriate way is something that attracts customers. If you have a travel business but everything is being done by word of mouth, then it will not work for long. Customers are interested in exploring every location on their own without any intervention of travel operators. They want to have entire control in their hand.

This is a website named “**Pearl of Indian Ocean**” that displays Tourist information about Sri Lanka. Here I'm going contain all the well-known tourist places. Let's explore what magic website can create for travel agencies.

2. Problem

Tourism has traditionally been the third largest foreign exchange earner in the country. Sri Lanka recorded over 1.9 million tourist arrivals in 2019, a 21 percent drop from the previous year owing to the aftermath of the April 2019 Easter Terror Attacks. It is estimated that the sector earned around \$3.5 billion in 2019. Approximately 570,000 tourists arrived in 2020. The effects of the global COVID-19 pandemic crippled the sector in 2020, which is currently catering almost exclusively to local tourists and international arrivals under strict “travel bubble” restrictions. Sri Lanka offers a mix of attractions including beaches, wildlife parks, rainforests, tea plantations, ancient ruins, Buddhist cultural sites, and festivals. Sri Lanka ranked 77th out of 141 countries in the Travel & Tourism Competitiveness Report 2019 of the World Economic Forum. India and the People’s Republic of China (PRC) contributed the largest number of tourist arrivals, followed by the UK, Germany, and France.

These are the most common problems on the travel websites that we have noticed:

- Not Mobile Responsive
- Inactive Google Analytics
- Facebook Pixel not installed
- Inquiry/reservation form not present or not working correctly
- The website does not possess an SSL certificate

Sub Problems I have faced during this task

- Wrong coding
- Details collecting
- Some errors

3. Solution Approach

Correct all those problems and maintain the website properly to attract more tourists to visit Sri Lanka.

4. Architectural diagram of the system

5. Used web technologies and examples

- **Html** - HTML elements form the building blocks of all websites. HTML allows images and objects to be embedded and can be used to create interactive forms. HTML is a programming language used to describe the structure of information on a webpage.

- **CSS** - It is the coding language that gives a website its look and layout. Along with HTML, CSS is fundamental to web design. Without it, websites would still be plain text on white backgrounds.

- **Java Script** - JavaScript codes are the important elements to develop websites, especially when it comes to handling user inputs and validation.

- **Vuejs Framework** - Vue simplifies the process of rendering web pages.

7. Conclusion

Tourism offers both investment and trade opportunities. The government currently offers beach land and islets for tourism development. Eastern Sri Lanka is an area that offers significant potential due to the quality of beaches in this area. Locations such as Pasekudah and Arugam Bay are premier destinations, especially for surfing enthusiasts. The country has several parks and forests that are home to a multitude of wildlife and unique flora species and is considered a biodiversity hotspot by several international environmental groups. A prohibition on sales of land to foreigners may complicate development of new properties. Eco-friendly resorts are also gaining popularity with many developers opting to establish “green” hotels to attract a growing ecotourism market segment. Increased tourism drove significant growth in the restaurant industry until the global pandemic.

Through this task I learned to create a website using web technologies and correct usage of coding.
